Hospitality IoT
Smart Hotel Solution

Improve the way you operate your business

From small independent hotels to large chains, the hospitality industry is challenged to offer the best customer experience while running sustainable operations.

Webee's IoT Solution can help you differentiate your business retaining customers and optimizing the use of resources. Our suite offers easy to implement property operations improvement application to take the hospitality experience to the next level.

Transform your business with easy to implement technology that allows customized solutions and guaranteed ROI.

Reduce Costs

Optimize your operations knowing exactly where inefficiencies are.

Improve Profitability

Save money through energy savings, early maintenance detection and increased service revenue.

Guest Experience

Increase customer loyalty adding convenience and improving guest comfort.

Helping Hotels go Green

Energy Savings

90%

Energy Measuring

Improve the use of energy by learning exactly where the consumption is going and when there's room for savings.

Flood Prevention

Receive instant notifications of water leaks to stop any damage and improve water conservation.

Air Quality and Environment

Measure air temperature to control AC and heating usage. Learn when there is room occupancy to turn it on or off accordingly and detect any dramatic change in temperature.

Make Your Guests Feel at Home

Make a real impact in your business taking the guest experience to the next level. Customize features according to guests individual preferences such as room temperature, usual service requests, lighting control, music, etc.

Add convenience through concierge by voice command and one click service requests using the battery-less Eny Button. Help guests feel at home through a unique experience.

The Future of Hotel Technology

Low Cost Implementation and Data Collection

Stick and play sensors and controllers:

Choose from a variety of devices to track and monitor different functions such as lighting, room occupancy, water leaks among others. Customize the solution to fit your operational needs.

Easy device administration:

Set up and manage your customized control panel to know exactly how each device is performing from anywhere at anytime.

Data accessibility:

Have a comprehensive view of all device performance to learn patterns of energy consumption and detect anomalies instantly.

We provide a unique customer experience that increases ROI by one stop retrofit solution.
